DETAILED ACTION

Reasons for Allowance

1. ***The following is an examiner's statement of reasons for allowance:*** In response to the office action, dated March 9, 2009, further in view of applicant's amendments filed on 05/05/09, the application has been carefully reviewed and respectfully considered.

Further, in view of the Office action made on May 05, 2008, Claims 1-13, 21 and 22 were indicated as having allowed subject matter. Claims 14-20 were rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. Patent No. 7,038,800 to Ono et al. ("Ono") in view of U.S. Patent No. 5,719,688 to Kagami ("Kagami"). In response Applicant cancelled those rejected claims 14-20.

However, claims 1-13, 21 and 22 were rejected under U.S.C 101 obviousness double patenting as indicated in the last Office action. In response to the rejection applicant has filed a terminal disclaimer on March 9, 2009, and the terminal disclaimer has been entered. The currently pending claims 1-13, 21 and 22 have been carefully reviewed, and therefore, claims 1-13, 21 and 22 are believed to be allowable for the reasons discussed below:

With respect to claims 1-6, the prior art searched and of record neither anticipates nor suggests, a method of connecting a first V.34 enabled fax machine to a second V.34 enabled fax machine over a network utilizing at least one gateway that operates in accordance with the T.38 un-enhanced protocol, said fax machines having an initial handshaking process during which an AnsAm signal consisting of a 2100 Hz tone with a 15Hz envelope is generated, said method including: placing a call by said first fax machine to said second fax machine over a voice grade connection, generating an AnsAm signal by said second fax machine in response to said call, modifying the AnsAm signal generated during the initial handshaking by removing the 15 Hz envelope, whereby the first fax machine does not generate a CM tone, and said second fax machine falls back to G3 mode, and said first and second fax machine communicate using the G3 protocol.

As to claims 7-12, the prior art searched and of record neither anticipates nor suggests, a method of connecting a first V.34 enabled fax machine to a second V.34 enabled fax machine over a network that has one or more gateways that operate in accordance with the T.38 un-enhanced protocol, said fax machines having an initial handshaking process during which a CM signal is generated which includes a bit indicating that the calling fax machine is V.34 enabled, said method including, placing a call to said second fax machine by said first fax machine over a voice grade connection, generating an AnsAm signal by said second fax machine in response to said call, generating a CM signal by said first fax machine, said CM signal having a bit

set to indicate that said first fax machine is V.34 enabled, modifying said CM signal in said gateway to disable said bit indicating that the calling fax machine is V.34 enabled, and said second fax machine falls back to G3 mode, and said first and second fax machine communicate using the G3 protocol.

Referring to claim 21, the prior art searched and of record neither anticipates nor suggests, a system for connecting a calling Super Group 3 fax machine and a called Super Group 3 fax machine over an IP network that includes gateways that operate in accordance with the T.38 un-enhanced protocol, said fax machines initially connecting over a voice grade line using the V.8 protocol, whereby the called fax machine generates an AnsAm signal, a method including the steps of: modifying said AnsAm signal whereby the called fax machine does not respond to the AnsAm signal with a CM tone, timing out by said called fax machine since it does not receive a CM signal, said called fax machine falling back to G3 mode as a result of said time out, and said calling and called fax machines proceeding to communicate in G3 mode.

Referring to claim 22, the prior art searched and of record neither anticipates nor suggests, a method of connecting a first V.34 enabled fax machine to a second V.34 enabled fax machine over a network by at least one gateway that operates in accordance with the T.38 un-enhanced protocol, said fax machines having an initial handshaking process during which an AnsAm signal consisting of a 2100 Hz tone with a 15Hz envelope is generated, said method including, placing a call by said first fax

machine to said second fax machine over a voice grade connection, generating an AnsAm signal by said second fax machine in response to said call, modifying the AnsAm signal generated during the initial handshaking by removing the 15 Hz envelope, whereby the first fax machine does not generate a CM tone, and said second fax machine falls back to G3 mode, and said first and second fax machine communicate using the G3 protocol.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
